Tayro Arce Briceño

Full Stack Developer & AI Automation Engineer

San José, Costa Rica · +506 8569 7537 · tayroarce@gmail.com · github.com/tayroarce-lab · tayroarceportfolio.vercel.app

SUMMARY

Full stack developer and AI automation engineer. I build web applications with Next.js, React, Node.js and Supabase, and integrate LLMs (OpenAI, Anthropic Claude) into real business workflows with n8n. I have shipped production systems used by paying clients: an AI-powered YouTube channel diagnostics app, a WhatsApp AI receptionist for clinics, and B2B email prospecting automation. Open to remote, hybrid and on-site roles. English B2.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, Tailwind CSS

Backend: Node.js, Express, Python, REST APIs, Socket.io

Databases: PostgreSQL, Supabase (Row Level Security), MySQL, Sequelize

AI & Automation: OpenAI API, Anthropic Claude API, LangChain, n8n, Make, Evolution API (WhatsApp), Chatwoot

DevOps & Tools: Docker, Vercel, Easypanel, Git/GitHub, AI-assisted development (Claude Code, Cursor)

EXPERIENCE

Freelance Full Stack & AI Automation Developer Mar 2026 – Present

Remote

- Built Juny Relay, a WhatsApp switchboard in daily use by a video-editing agency that hides client identities from editors (Next.js, Auth.js, Drizzle, Supabase Postgres with RLS and Realtime, Evolution API, encrypted data, Vitest and Playwright tests).
- Built and maintain an AI web app (Next.js, Supabase, OpenAI, YouTube Data API) that drafts YouTube channel diagnostics for a content agency; deployed on Vercel with automatic deploys, at about USD 0.002 per report.
- Built a WhatsApp AI receptionist for dental clinics (n8n, Evolution API, Chatwoot, OpenAI, Supabase) that books appointments, follows up with patients and transcribes voice notes.
- Built a B2B email prospecting system (n8n, Supabase, Docker): scraped and processed 430+ YouTube leads with automated follow-up sequences, later adapted to serve multiple clients.

AI Automation Developer (Backend & Frontend) — Voltify Ecom Partners May 2025 – Feb 2026

- Built AI automations and system integrations (LLM APIs, CRMs, email and custom REST APIs) for clients of an AI automation agency.
- Supported backend and frontend development of client web applications, APIs and internal tools.

PROJECTS

Alumni Platform — independent foundation supporting UCR students 2026

Next.js 14 · TypeScript · Supabase (PostgreSQL + RLS) · NextAuth v5 · Claude API · Team project

- Role-based platform for students, alumni and admins, with server-side authentication that enforces Row Level Security, passwordless magic links, and an AI tool that adapts CVs for ATS in real time using Claude.

Chamos House — Restaurant management system 2026

Node.js · Express · React (Vite) · TypeScript · MySQL (Sequelize) · Socket.io · n8n

- Layered backend (routes, controllers, services, models), real-time kitchen display board over Socket.io, and WhatsApp ordering in natural language through n8n.
